Veneer Services
Attention: Dane Floyd

Hello Dane,

Just a short note to thank you for assisting in my selection of an in-line clipper for my new Mill. As you know, when I started my Mill in 2006 I had a Prentice Anvil clipper (quite old) that I was going to refurbish, seeing prices on new clippers.

After talking to you and explaining how I was going to peel and reel my veneer, you suggested the Chang Tai automatic veneer clipper. When you told me it was a shear anvil clipper (meaning it stops the conveyor every time it clips) I was very sceptical! You convinced me that it would work by giving me the specs, showing me the video and after one year in operation I have found it to be all that you said it would be. The accuracy is phenomenal, the maintenance is virtually minimal and I believe that the clipper has basically paid for itself by the accurate clipper I have received (always the right size.)

Thank you again!

Best regards,

Ken Smith,
