DRUM CHIPPERS

Drum chippers from Veneer Services[®] will withstand years of heavy use and deliver a consistent, reliable product throughout their lives. We offer two models: Variable-Height Infeed (VHI) for voluminous materials and Fixed-Height Infeed (FHI) for denser materials.

DRUM CHIPPERS

Our drum chippers are uniquely designed to reduce maintenance and speed up knife changes. Model VHI features an articulating infeed role while model FHI has a fixed infeed measurement. Both can be used for chipping whole logs, pulp wood, veneer, cores, slabs, scraps, and many other materials.

01

MORE UPTIME

- Unique control system monitors the load on the drum and changes the feed rate accordingly
- If a crash occurs, the knives are pushed back into the drum, allowing obstructions to clear
- Drum is attached to the driveshaft by an expanding ring—a stronger method than keyways
- Can be equipped with a break-away anvil base to pass large pieces without damaging the machine

02

MORE FEATURES

- Can easily incorporate metal detectors without fiberglass sections
- Screens ensure an even, consistent chip
- Secondary anvils rechip oversized materials
- Segmented lower rollers allow for easier maintenance and replacement
- Cover opens hydraulically for quick knife changes
- Optional hydraulic disc brake for knife changes or emergency stops

03

MORE VERSATILITY

- Two models for varying needs: Variable-Height Infeed (VHI) and Fixed-Height Infeed (FHI)
- Available from 50 to 2,000 hp
- Output of 7 to 200 tons/hour
- Horizontal or top feed
- Rear or bottom discharge
